

## Height Problem

✓ next smaller on left

Te: OCN)  
SC: OCN)

# Agenda

- Binary search Basics
- Search insert position
- Find first and last position
- Square root of a number
- Search in a 2D Matrix

Binary Search. { Algorithm } searching purposes

int[] arr = { 1, 3, 7, 10, 11, 14, 20, 26 }      key = 14

Brute force

✓ Linear search

```
for (int i = 0; i < n; i++)  
{  
    if (arr[i] == key)  
        return i;  
}
```

TC:  $O(N)$   
SC:  $O(1)$

## Puzzle

min floor from which if you throw the brick it breaks.

## Brute Force

→ 100 fresh bricks

using 1<sup>st</sup> brick I eliminated 50 floors  
using 2<sup>nd</sup> brick I eliminated 25 floors  
using 3<sup>rd</sup> brick I eliminated 12 floors

using  $k^{\text{th}}$  brick, I eliminated 1 floor.

# N - flows

- - - - -

$$\frac{N}{2^K} = 1$$

$$2^K = N$$

taking  $\log_2$  Both sides

$$\log_2 2^K = \log_2 N$$

$$\cancel{K \log_2 2} = \log_2 N$$

$$K = \log_2 N$$

throws required,

$$\log_2(100)$$

$$\cancel{2 \times \log_2 10} \rightarrow 3.1 \approx \underline{\underline{7 \text{ Bricks}}}$$

int[] arr = { ~~1~~, ~~3~~, ~~7~~, ~~10~~, 11, ~~14~~, ~~20~~, ~~26~~ }

key = 11

Tc:  $O(\log_2 N)$  } Binary Search  
Sc:  $O(1)$

- ① define region of search
- ② divide region into two parts.

case 1 key == arr[mid] : return mid

case 2 key > arr[mid] : eliminate left side

case 3 key < arr[mid] : eliminate right side

## Binary Search

↳ array should be sorted } search region should be sorted }

tc:  $O(\log_2 N)$  sc:  $O(1)$

↳ BS 99% of time.

Search insert position / ceil value / find just greater person.

$\text{int arr} = \{ \overset{0}{1}, \overset{1}{3}, \overset{2}{5}, \overset{3}{10}, \overset{4}{11}, \overset{5}{20}, \overset{6}{27} \}$        $\text{key} = 2$

Brute Force

→ Linear Search, { return first ele greater than you }

✓ ~~TC:  $O(N)$   
SC:  $O(1)$~~

$\text{int[]} arr = \{ \overset{0}{1}, \overset{1}{3}, \overset{2}{5}, \overset{3}{10}, \overset{4}{11}, \overset{5}{20}, \overset{6}{27} \}$

pow = 2

## Square Root

$$\left. \begin{array}{l} N = 36 \\ \text{sqrt}(N) = 6 \end{array} \right\}$$

$$\begin{array}{l} N = 110 \\ \text{sqrt}(N) = 10 \end{array} \quad \checkmark$$

Brute force

```
    paws = -1;  
    for (int i = 0; i <= N; i++)  
    {  
        if (i * i <= N)  
            paws = i;  
    }  
    return paws;
```

$O(N)$   
 $O(1)$

Optimized

```
int ans = 0;  
for (int i = 1; i * i ≤ N; i++)
```

```
{  
    ans = i;
```

```
}
```

```
return ans;
```

Tc:  $O(\sqrt{N})$   
Sc:  $O(1)$

}

Optimiere

$$N = 40$$

$$\checkmark 20 \times 20 = 40$$

pans = ~~11~~ 6

$$\{TC: O(\log^2 N)\}$$

$$\checkmark N = 20$$

$$paw = \cancel{1} \cancel{2} 4$$

$$\left. \begin{array}{l} s_i = \cancel{1} \cancel{2} \cancel{3} 5 \\ e_i = \cancel{2} \cancel{3} 4 \end{array} \right\}$$

$$nuc = \cancel{1} \cancel{2} \cancel{3} \cancel{4}$$

$$TC: O(\log^2 N)$$

$$SC: O(1)$$

$$\sqrt{N}$$

$$\sqrt[2]{10000} = 100$$

$$\log^2 N$$

$$\begin{array}{l} \log^4 10 \\ \log^2 10 \\ 4 \times \log 10 \\ \log 10 \\ = 13 \checkmark \end{array} \rightarrow 31$$
